ALERT | PREVENTION | SECURITY

# ELECTRICAL FAILURE MONITORING SYSTEM

FIRE PREVENTION  
LEAKAGE CURRENT  
TEMPERATURE

## 24/7 MONITORING

Easy installation  
by a certified electrician

Independent system

Up to 64 reading points

Real time data

Customized report

No subscription required

## Be notified!

certified 

Alerts of any electrical abnormalities detected by FarmGuard are sent via the FarmQuest service by text message and/or email.

The most critical alerts can also be transmitted via the telephone answering machine or via the customer's alarm system.

Adaptable to all buildings and all productions.

System self-validation. Any connection problem (internet, power supply, sensors, heat detectors) is reported.

## ELECTRICAL FAILURE DETECTION AGRICULTURAL | COMMERCIAL | INDUSTRIAL

Monitoring of the total current leakage of the defective equipment and the temperature of the electrical components. Leakage current is due to a defective device, whereas overheating of an electrical panel is due to a faulty contact. In addition, **FARMGUARD** also supports heat detectors (optional).

Installation **self-validation** at building and system level

- High panel temperature versus room temperature
- Electrical panel leakage current (normal/abnormal)
- Heat detector, probe and sensor (powered or not)
- Module and current sensor (powered or not)
