### Troubleshooting

#### Screen is blank

This may indicate that the GE-OPTIGAIN7 controller is not powered or that the connector between the top and the main boards is disconnected.

#### Troubleshooting procedure:

1. Verify that the controller is powered.
2. Verify that both connectors are properly connected.
3. Contact your supplier if the cause is not determined.

#### Temperature, Water meter or Humidity probe reads LO or HI

This may indicate that the corresponding measurement value is below/above a critical value or that the probe is disconnected or defective.

#### Troubleshooting procedure:

1. Check all connections.
2. Verify independently the corresponding measurement value. If it is not the same as the value measured by the probe, replace the probe.
3. Contact your supplier if the cause is not determined.
